

There is more to Rockdoor.

Reassuringly Rockdoor

When you close and lock a Rockdoor, you can tell that only the best components are used in its construction.

Rising Tide

The inner frame is completely impervious to water and is reinforced with very strong aluminium. This is mitred and runs around the full perimeter of the door sash. Unlike most other composite doors, which have wood inside them which can rot or swell.

Cold Shoulder

The 25mm hook locks combined with the strength and stiffness of a Rockdoor, stop the door from being forcefully barged open.

Money Where Our Mouth Is

The cylinders in a Rockdoor come with a £2,000 security guarantee. They have been designed to meet the toughest of tests and offer the highest levels of security available.

Diamond Tipped

The only way through a Rockdoor is with a key, unless you're a firefighter. We often set up doors for the fire service to come and test how they would gain entry in case of a fire.

Meshed Up

Rockdoor is the most secure composite door in the UK. With laminated glass and security mesh, it is virtually impossible to break in through it.

Knock Knock

When tested with a battering ram, Rockdoor is 35% stronger than a typical composite door.

Tailor Made

Every Rockdoor is tailor made, not cut down to size. This makes every Rockdoor as strong as the next one, whereas most GRP composite doors are cut to size which weakens the overall door.

Don't Fade Away

As S-glazing is part of the door, the colour match is perfect, unlike many glazing cassettes. As cassettes are made from different materials to the skin, they fade at a different rate so in time they can look different to the door.

Repair & Replace? Or Get Burgled?

Let's be fair, if the glass can be replaced, it can also be removed - by burglars. It's not rocket science. S-glazing locks the units in place and cannot be removed.

Clean Lines

Unlike bulky glazing cassettes, S-glazing is easy to wipe clean as there are no awkward corners or beads of silicone to clean.

Silence Please

The same points that make Rockdoor so thermally efficient, also help keep out external noises like cars whizzing down the road.

Draughty

The glass is bonded into the door so there is no way it can let in any draughts, or worse a water leak. Unlike cassettes that are clipped in which can be draughty and leaky, especially if the hand applied silicone seal fails.

No Bow, No Go

The combination of the stiffness of the door and the outer frame, the hook locks and the gaskets, ensure that the door will function whatever the weather.

There is more to Rockdoor.

Thick Skinned

Rockdoor use the thickest skin material found on any composite door. We combine this with a very high density core to create a door which can easily stand up to what everyday life can throw at it.

We Don't Want To Trip You Up

We offer a 15mm aluminium threshold that won't trip you up. We also offer two PVC thresholds for extra thermal efficiency.

How Old Are You?

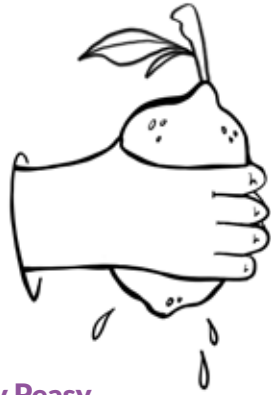

We registered the company in 1996 after a couple of years development and then made our first door in 1997.

In, Out, Shake It All About

Not only do the hinges allow adjustment up and down, and side to side, they also allow in and out.

Texture Perfect

Rockdoor's door skin is unique. The grain detail looks different to other doors, from traditional to contemporary, and it's made to take life's bumps and bangs.

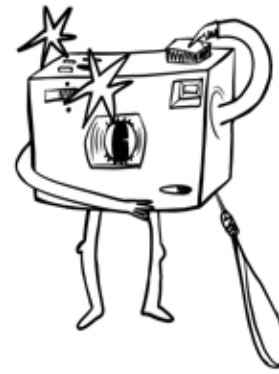

Easy Peasy

All the surfaces on all components are low maintenance. A wipe down with warm soapy water will do for almost everything and a quick wipe with some lubricant once a month on moving components.

Sleek Finish

S-glaze is more aesthetically pleasing as it is part of the door, rather than a cassette that clips in afterwards. With S-glaze the glass is neat and tidy and sealed within the door, not siliconed in afterwards.

Over Exposed

The keeps are fully adjustable and can be used to increase the compression for a draught proof seal for the most exposed locations.

Make The Switch

Heritage plus and keywind locks come with a switch latch as standard. This means you can choose how you gain entry to your home using the latch.

Made At Home

Proudly made in Britain for over 25 years, not imported from abroad.

I've Never Seen That Before

All our glass designs are exclusive to Rockdoor. We're also the only door supplier making the contemporary glass designs using our own 3D glass design process.

Toasty

A 50mm thick door combined with a high density core, energy efficient glass and high-performance seals, creates a very thermally efficient door.

Why Bother?

Because we're obsessed with doors! But we also set out to create a high security door that looked great, was thermally efficient and that would stand the test of time.
